

D7 Inflation/ Deflation Valve

Registered Design

The D7 valve is designed for use in demanding applications where a compact design is required; such as Military and Commercial RIBs, River Rafts and Inflatable Boats.

It has a shorter, smoother internal profile, making it ideal for smaller diameter tubes, for example inflatable kayak floors.

- 100% tested during production.
- ACETAL (POM) plastic parts give high strength, chemical, ozone and shock resistance.
- Cap works as a second seal
- Internal cap strap.
- Core available in grey or black. Caps available in grey, black, white or yellow.
- Company brand can be added to the cap, subject to a minimum quantity and tooling charge.

D7 Key attributes and benefits:

- High flow for size.
- Rugged and reliable.
- Low profile at 50mm overall height.
- Smooth, snag free cap.
- 'O' ring seal on the valve core to reduce the risk of lateral leaks in the fabric.
